GITHUB
github.com/louispouillet

PORTFOLIO
louis-pouillet.yopay.fr

SKILLS

LANGUAGES
Python, TypeScript, JavaScript, Java, C

AWS
Lambda, API Gateway, DynamoDB, Step Functions, Cognito, Bedrock, Transcribe, EventBridge, S3

IAC & CI/CD
Terraform, AWS SAM, GitHub Actions (OIDC)

WEB
React, Express, REST APIs

PRACTICES
Hexagonal architecture, OAuth 2.0 and PKCE, DynamoDB single table design, automated tests

LANGUAGES

French	Native
English	Fluent

PROFILE

Second year Computer Science student at Epitech Toulouse, after three years in Australia where I studied at 42 Adelaide and became fluent in English. I build serverless backends on AWS and authentication systems (Cognito, OAuth 2.0). Looking for a **work study position** in AI and cloud engineering, and available for **freelance missions**.

EXPERIENCE

SIGTERM · Cloud Engineering Intern — Toulouse
Jun 2026 → Aug 2026

- Built a video auto tagging pipeline for Moggo: Step Functions orchestrating one Lambda per step, Amazon Transcribe for speech to text, and Claude on **Amazon Bedrock** to extract tags from the transcript.
- Built an internal expense reimbursement app where **Amazon Bedrock** reads the amounts on receipts, and a PDF summary is sent through Gmail (React, Python, DynamoDB).
- Designed a multi app SSO proof of concept on Amazon Cognito (OAuth 2.0 Authorization Code with PKCE) for Laravel apps and SPAs, with OAuth scopes and Cognito groups, provisioned with Terraform.
- Built a custom Lambda authorizer accepting both Cognito JWTs and API keys, after auditing the migration of about 110 API routes.

Tech: AWS Lambda, Step Functions, Bedrock, Transcribe, Cognito, API Gateway, DynamoDB, Terraform, SAM, Python, TypeScript

PROJECTS

YOPAY · Co-founder, backend and cloud — Personal project
Aug 2026 → present

QR code table ordering for independent restaurants, built with a friend.

- Serverless backend on AWS (Lambda, API Gateway, DynamoDB single table) deployed with SAM, following a hexagonal architecture.
- Integration with the Zelty point of sale through HMAC signed webhooks and an asynchronous menu sync with EventBridge.
- Infrastructure with Terraform, CI/CD with GitHub Actions and OIDC, no long lived AWS keys.

CHERRY · Full stack developer — Epitech, team of 4
Jan 2026

Social app to discover and join local events by swiping. React and TypeScript frontend, REST API with Express, MongoDB.

More projects (AI automation, reinforcement learning, multiplayer game) on louis-pouillet.yopay.fr

EDUCATION

Bachelor in Computer Science, Epitech — Toulouse (France)
2025 → present

Peer to Peer Programming School, 42 — Adelaide (Australia)
2023 → 2024

High School Diploma, Blaise Pascal — Nouméa (New Caledonia)
2020 → 2022
