PROFIL

I'm a first-year Bachelor student in Computer Science at Epitech. After spending two years in Australia, I gained confidence in English and improved my social skills. I love learning new things through projects and enjoy solving challenging problems. I'm eager to contribute to real-world projects in a collaborative environment this summer.

Projects

Push Swap - C
Algorithmic project focused on sorting integers using the minimum number of operations.
- Designed and optimized sorting strategies
- Implemented stack-based data structures
- Focused on algorithm efficiency and complexity

Philosophers - C
Multithreading project based on the Dining Philosophers problem.
- Implemented thread synchronization
- Managed shared resources using mutexes
- Learned about concurrency and race conditions

Cherry - React , Express
Tinder-like application for discovering events by swiping.
- Developed frontend with React and TypeScript
- Built REST API with Express JS
- Implementation of an event swipe system

Etardis - Python
Experimental model for predicting train delays based on historical data from SNCF.
- Data cleaning and analysis
- Model training and prediction evaluation
- Built a prototype prediction system

Education

Epitech, Toulouse, Bachelor in Computer Science
2025 – Present

42 , Adelaide, Peer-to-Peer Programming School
2023 – 2024

Blaise Pascal, Nouméa, High School Diploma
2020 – 2022
